

KAYLA OROZCO - TX | kaylamarieorozco@gmail.com | [LinkedIn](#) | [Portfolio](#)

Professional Summary

Design Engineer who owns both the visual/UX design and the technical implementation of what I ship, from prototype to production code. As founder of Mesquite & Thorn Digital, I independently design and build full-stack apps (React Native, Next.js, TypeScript, Firebase) end-to-end: custom design systems, typography and color tokens, and AI-powered interaction flows like OCR capture and multi-step LLM list parsing. My background as an AI implementation engineer, architecting agentic, LLM-driven dialogue systems for Fortune 100 clients (Lowe's, Allstate), gives me direct experience designing interfaces where AI reasons over state and takes multi-step action, not just chat UI. Comfortable as the sole designer and engineer on a project, and equally comfortable in ambiguous, fast-moving environments where the problem space is still being defined.

Experience

Founder & Design Engineer | Mesquite & Thorn Digital, LLC *May 2026 - Present* | FT

- Sole designer and engineer building [School Supplied](#), a React Native iOS app that uses OCR and an LLM-based parsing pipeline to turn photographed school supply lists into one consolidated shopping list.
- Own the full stack: Expo, TypeScript, NativeWind (Tailwind), Firebase (Auth, Firestore, Cloud Functions), and EAS for build and deployment; shipped Sign in with Apple and an Apple Vision-based OCR capture flow.
- Independently designed and built the companion marketing site (Astro on Vercel), including analytics and a waitlist funnel, end to end.
- Building [Handsful](#), a React Native/Expo app for parents of multiples, designing for simultaneous multi-entity logging, side-by-side comparison views, and shared caregiver access informed by my own experience parenting multiples.
- Architecting the full product across data model, subscription tiers, and localization (English/Spanish).

Lead AI Interaction Engineer | NiCE *April 2026 - Present* | FT

- Lead complex enterprise agentic AI implementations end-to-end, from technical discovery and system design to production deployment, as the primary technical point of contact for strategic customers, resolving blockers outside standard support scope.
- Run conversational design workshops, mentor colleagues on AI configuration, and produce reusable documentation and training materials for long-term partner self-sufficiency.

Product Designer, Conversational UX/VUI | Lowe's *Feb 2023 - Feb 2026* | FT

- Architected the transformation of a legacy IVR into a generative LLM-powered agentic platform: integrated new AI capabilities into an existing enterprise stack and enabled dynamic, intent-driven dialogue, improving customer self-service containment.
- Prompt-engineered multi-step LLM functions for revenue-generating product inquiry experiences and optimized a customer-to-agent summarization tool, reducing associate cognitive load during live interactions.
- Launched a voice-enabled associate call-out experience saving thousands of labor hours monthly, and a conversational lead form that directly contributed to installation conversion growth.
- Delivered Figma/Voiceflow prototypes, flow architecture, and system documentation to align cross-functional partners across product, engineering, data science, and operations.

UX Designer, Conversation Design | Allstate via Aquent *July 2022 - Feb 2023* | Contract

- Designed and optimized enterprise insurance chatbot flows, improving containment and intent resolution accuracy through NLU tuning and human-centered design methodologies.

Jr Conversation Designer → Conversation Designer | SmartAction.ai *August 2021 - July 2022* | FT

- Designed AI-driven voice assistants across healthcare and retail verticals; built scalable NLU models and reusable conversation design systems adopted across multiple client accounts.

Jr Conversation Designer | Freshriver.ai *March 2021 - August 2021* | Internship

- Designed user-centered dialogue for a contactless higher education enrollment assistant, developing conversational personas and flow logic in collaboration with engineering and product.

Skills

Design: Figma, Component-driven UI architecture, Design systems, Interaction design, Rapid prototyping, Responsive design, Accessibility

Generative & Agentic AI: Prompt engineering & optimization, LLM orchestration, Multi-step agentic dialogue design, RAG, Batch testing

Engineering: React Native, Expo, TypeScript, Next.js, Node.js, NativeWind (Tailwind CSS), Firebase (incl. Cloud Functions), REST APIs, Git, HTML/CSS

Process & Collaboration: End-to-end ownership, Cross-functional leadership, Ambiguous/0-to-1 problem solving, Experimentation & iteration, QA & performance testing

Education

B.A Interdisciplinary Studies, Minor in ESL - University of Texas at San Antonio

UX/UI Certificate - University of Texas at San Antonio

Conversation Design Certificate - Conversation Design Institute

AI Trainer Certificate - Conversation Design Institute

Cognigy Certified Specialist - NiCE Cognigy
